

Technical Perspectives on Analyst's Rating Changes

CNXT - case study
12-27-2008

CNXT – The TPARC report from October 2006 called attention to the downtrend that had been in place for several years and that the stock was performing poorly. That downtrend has continued until the present time. The charts do not agree and that is due to the adjustment for a 1-for-10 reverse split that was done in 2008. Adjusting for the reverse split indicates that the stock has fallen from over \$20 per share to under \$1 per share currently.
