

Technical Perspectives on Analyst's Rating Changes

PGIC case study

06-30-2008

PGIC – A major top was clearly visible on the TPARC report for March 6, 2007 and a downtrend was noted. The downtrend has continued and the stock has fallen from a little over \$7 per share to under \$2 per share. This has been a very persistent downtrend and the decline in price has been dramatic.
