

Technical Perspectives on Analyst's Rating Changes

SEPR case study
11-09-2007

SEPR proved to be a very poorly performing stock since the opinion regarding a major top on 02-01-2006. It has gone down in a very persistent trend since that time. There are no indications of a turnaround in its performance even after almost two years have past. It has lost more than 50% of its value while the market has gone up.
